

Team Rehab's AI-Powered Approach to Streamlining Compliance

“We tend to do the best business with organizations that have overlapping goals and are great to work with. PredictionHealth fits both molds.”

-Nick Weber, CEO, Team Rehab

Objective

To make it as easy and intrinsically motivating for physical therapists and clinic owners to document compliantly while protecting time with patients.

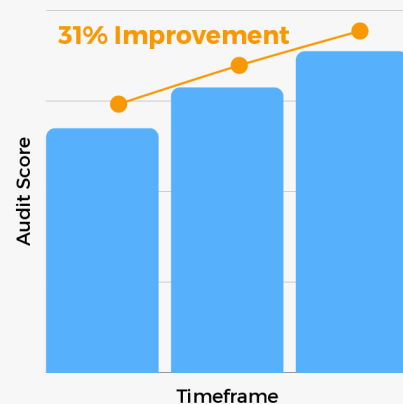

Solutions

Team Rehab implemented Practice Intel, an AI-powered platform that gave them visibility into their compliance risks and the charting behaviors and habits of their therapists. The platform identified their most significant pain points and areas with the greatest opportunity for improvement. They used this data to tailor training that helped therapists correct their compliance gaps. Automated, individual scorecards powered better 1:1's to further improve compliance scores without adding to therapists' workloads.

Results

- 31% improvement in compliance audit score
- More efficient therapist documentation
- Better visibility to risks and therapist training needs
